Job Costing

Introduction

Managing job profitability can be very demanding, so it's important to have the right tools to understand the exact status of each job. Job costing is vital if your business is to maintain complete control over all jobs and understand at a glance the costs and revenues associated with each one. Without this type of data, it can sometimes be difficult to know where potential problems lie.

With the MiraclePay Job Costing module, your business can gain full visibility of job profitability, leaving you in control to deliver successful projects.

Functionality

The Job Costing module is an optional 'add-on' to MiraclePay Enterprise. This module provides the following functionality:

- Data capture at job-cost level for hours worked or other related costs e.g. miles covered, 'cash target' etc.
- Data entry at job-cost level
- The payslip can be summarised to show hours worked across jobs or it can be reported at a more detailed level
- Optional report to list pay 'makeup' for each employee to support the payslip where the summarised option is used
- Where T&A is in use, there is an option to match hours worked against jobs performed
- The analysed job level data can be forwarded to the Microsoft Business Central Financial modules
- Option to allocate 'company costs' over the jobs worked for an employee
- Optional integration to Dynamics 365 Jobs within the ERP application
